

Escape of water is costing
the insurance industry

£1.8m

per day

Reducing Escape of Water Claims at the Flick of a Switch

If a burst pipe is left unchecked for one day, up to **9,600 litres** of water could flow into the home. (That's equivalent to 48 full baths.)

When there's a water leak, it's imperative to cut off the water supply as soon as possible to minimise damage to the home, which is currently costing the insurance industry around **£1.8m per day**.

In many cases, the stopcock is hidden away. It could be in an awkward position under the sink, behind a cupboard – or even under the floorboards. And in a recent survey of adults under 45, it was discovered that:

45% had no idea where the stopcock was located, whilst 75% had tried to find it but couldn't.

Even when the stopcock is eventually found, there's a good chance it won't turn due to limescale build-up or years of re-painting.

Contact Mark Devanney on **0121 280 1685** or email **markdevanney@surestop.co.uk** to find out how you can start to reduce your Escape of Water claims.

There's a sure solution

The Surestop stopcock is operated by a switch on the wall that's clearly visible and easily accessible.

At the flick of the switch, the mains water supply is instantly turned off, while the app-enabled Surestop iWatercontrol Hub allows remote monitoring of the water system so that the homeowner can turn the water off from anywhere in the world. And being easy to operate, also makes the Surestop perfect for people with mobility of dexterity limitations.

Surestop stopcocks are easily installed without electrical work and provide a low-cost solution for preventing thousands' of pounds of water claims.
